

ATTENTION EMPLOYEES!

Methamphetamine manufacturing is on the rise

Items to watch for:

- Cold and asthma tablets containing pseudoephedrine and ephedrine
- Acetone
- Rubbing and isopropyl alcohol
- Iodine
- Starter fluid (ether)
- Gas additives (methanol)
- Drain cleaner (sulfuric acid)
- Muriatic acid
- Brake cleaner (toluene)
- Lithium batteries
- Rock salt
- Matchbooks (red phosphorus)
- Lye
- Paint thinner
- Aluminum foil
- Glassware
- Coffee filters
- Propane tanks

Take a look at these common household items. Most of our valued customers buy these products on a regular basis and for the intended use.

Some people, however, see something quite different. Their intent is to make illegal drugs such as methamphetamine or “meth.” Frequent or large-quantity purchases of these and similar products may be a sign of illegal drug manufacturing.

Be aware, but be smart. Don’t take matters into your own hands. Don’t confront the purchaser. Inform your manager of suspicious activity. Or, call local law enforcement at:

(Write local law enforcement phone number here.)
